## TOPOLOGICALFUNC

`topologicalFunc.GaussianFiltration(GaussianRandomField, type='lower')`

Generates Filtration for the Gaussian Random Field.

**Parameters**

- **GaussianRandomField** (*array*) – numpy 2-D array. The Gaussian Random Field generated from the class using `Gen_GRF` method.
- **type** (*string*) – Takes input either 'lower' or 'upper' for lower or upper filtration.
- **nsiz** (*integer*) – Size of the Gaussian Random Fields grid.

**Returns** Filtration Diagram

**Return type** Dionysus object

`topologicalFunc.GenerateBettiP(Filtration, thresholds_start, thresholds_stop, type='lower')`

Generates the Betti numbers from the Filtration diagram.

**Parameters**

- **Filtration** (*Dionysus object*) – Output of GaussianFiltration.
- **thresholds\_start** (*float*) – start value for generating superlevels of the Gaussian Random field .
- **thresholds\_stop** (*float*) – stop value for generating superlevels of the Gaussian Random field.

**Returns** Multidimensional array containing Betti numbers for different dimensions

**Return type** Numpy array

`topologicalFunc.GenerateGenus(Betti_array)`

Generates the Genus curve for gaussian random field using Betti arrays.

**Parameters** **array** (*Betti*) – Betti array from GenerateBettiP.

**Returns** 1-D array containing Genus curve for the Gaussian random field.

**Return type** Numpy array

## UTILITIES

`utilities.SaveROC(PFA, PD, nsize, num_iter, H0, H1, Betti, type)`

Saves the PFA and PD array with the labels provided through parameters.

**Parameters**

- **PFA** (*array*) – numpy vector. The PFA array generated during ROC gen.
- **PD** (*array*) – numpy vector. The PD array generated during ROC gen.
- **nsize** (*integer*) – Size of the Gaussian Random Fields grid.
- **num\_iter** (*integer*) – Number of iteration for which ROC gen is run.
- **H0** (*integer*) – Power spectral index of Null Hypothesis.
- **H1** (*integer*) – Power spectral index of Test Hypothesis.
- **type** (*string*) – type of the ROC curve generated

**Returns** None

**Return type** None

`utilities.likelihoodratio(correlation0, correlation1, X0, X1)`

Calculates the likelihood ratio for the False alarm and detection.

**Parameters**

- **correlation0** (*array*) – Correlation matrix for the Gaussian Random Field for null hypothesis.
- **correlation1** (*array*) – Correlation matrix for the Gaussian Random Field for test hypothesis.
- **X0** (*array*) – Gaussian Random Field of null hypothesis as a 1-D array
- **X1** (*array*) – Gaussian Random Field of test hypothesis as a 1-D array

**Returns** likelihood ratio

**Return type** float

`utilities.plotROC(PFA, PD, nsize, num_iter, H0, H1, Betti, type)`

Plots the PFA and PD ROC graph with the labels provided through parameters.

**Parameters**

- **PFA** (*array*) – numpy vector. The PFA array generated during ROC gen.
- **PD** (*array*) – numpy vector. The PD array generated during ROC gen.
- **nsize** (*integer*) – Size of the Gaussian Random Fields grid.

- **num\_iter** (*integer*) – Number of iteration for which ROC gen is run.
- **H0** (*integer*) – Power spectral index of Null Hypothesis.
- **H1** (*integer*) – Power spectral index of Test Hypothesis.
- **type** (*string*) – type of the ROC curve generated

**Returns** None

**Return type** None

## GAUSSCLASS

```
class gaussClass.GaussianRandomField(Nsize, n)
    The class for making Gaussian random field with specified spectral index and size of grid.

    Nsize
        size of the grid.
        Type int

    n
        Spectral index of the power law used to generate the Gaussian Random Field.
        Type int

    k_ind
        Grid in the fourier space.
        Type array

    PowerSpectrum
        The power spectrum grid made using the spectral index used to make the Gaussian Random Field.
        Type array

    corr_s
        Correlation matrix in the fourier space.
        Type array

    corr_f
        Correlation matrix in the spatial space.
        Type array

    Gen_GRF (type='grid')
        GenerateBettiP

        Generates the Gaussian Random field with the specified paramters.

        Parameters type (str) – Takes either ‘grid’ or ‘array’ in string format

        Returns: Numpy array: Gaussian Random field

    PowerSpectrum_grid_generator()
        Generates the powerspectrum grid.

    fourier_space_ind()
        Generates the fourier space grid.

    gen_correlation()
        Generates the correlation matrices in fourier and spatial spcae.
```

## INDICES AND TABLES

- `genindex`
- `modindex`
- `search`

## PYTHON MODULE INDEX
